

NEUROTOXICITY SCREENING SURVEY: CLINICAL REPORT¹

Respondent's name: Wandner, Heike-Ellen
Gender: Female
Date of scoring: 5/28/96 Age: 48
Referred by: Mr. Seigfried Fischer

Zur Kenntnisnahme

<u>Symptom Category</u>	<u>Classification</u>		
	<u>Within Normal Limits</u>	<u>Borderline</u>	<u>Elevated</u>
Memory and Concentration _____			X
Autonomic Nervous System _____			X
Vision _____			X
Hearing _____			X
Balance _____			X
Smell-Taste _____			X
Peripheral Numbness _____			X
Sensory-Motor _____			X
Chemical Sensitivity _____			X
Emotionality _____			X
Distortion _____		X	
Overall Neurotoxicity Indicator: 415 _____			X
(Cutoff = 206)			

An elevated score indicates that the respondent reported symptoms in that category similar to those reported by patients with neurotoxicity. This respondent's responses were consistent with neurobehavioral toxicity. The respondent should be further evaluated by a physician and either Dr. Singer or a neuropsychologist with experience in toxicology.

Raymond Singer, Ph.D.
Neurobehavioral Toxicologist
Neuropsychology Diplomate, ABPN
Fellow, American Psychological Association
